COMPARISON · LAYER 1 · FOUNDATIONS

AI ELT vs Airbyte

data that arrives understood.

The best-known open-source data mover, against an agentic studio that reads, maps and builds your lake.

Shayak Mazumder
Founder, CEO and CTO, Adya AI

AIRBYTE

An AI-assisted pipe. You design every pipeline.

vs

ADYA · AI ELT

An agent that reads each source and builds the lake.

AGENTIC MODE

Two ways to make data agent-ready: *move it, or understand it.*

AIRBYTE · YOU DESIGN IT

AI helps build connectors. People design the pipeline.

01 Pick sources, destinations and sync modes

02 Map schemas and transform downstream

03 Model and maintain the warehouse

AI ELT · THE AGENT BUILDS IT

An agent reads each source, maps it and builds the lake.

01 PDFs, images and voice into structured tables

02 Schemas mapped across databases on its own

03 Lake built, refreshed and audited on schedule

Airbyte Agents (May 2026) give your agents context from your data. They do not build your pipelines or your lake.

What Airbyte does well, *and where AI ELT keeps going.*

WHERE AIRBYTE IS STRONG

600+ connectors
The largest open-source replication catalogue, with CDC for major databases.

Built for engineers
PyAirbyte, Terraform, an API and MCP servers for pipeline work.

AI-assisted building
An AI Connector Builder writes new connectors from API docs.

WHERE IT STOPS, AND AI ELT KEEPS GOING

Agent designs the pipelines
AI ELT's agent plans the pipeline from your goal and builds it.

You prompt, Agent comprehends your intent
AI ELT reads tables, charts and headers and maps them to your schema.

Unstructured to Structured
AI ELT turns PDFs, images and voice into clean, structured rows with lineage.

AI ELT and Airbyte, *side by side.*

	Airbyte	Adya AI ELT
Building	You configure each pipeline	The agent builds it from your goal
Connections	600+ prebuilt connectors	Shared MCP gateway, 1,000+ integrations
Unstructured data	Document text extraction	PDFs, images, voice into structured rows
Schema mapping	You map; transform with dbt	Mapped across databases automatically
Data lake	You design and model it	Built and refreshed on schedule
Lineage	Sync logs	Every run logged with lineage
For AI agents	Context store for your agents	Feeds SAI, RAS, Model Studio and Karma

Airbyte details from Airbyte's docs, blog and pricing page, October 2026.

One goal, two journeys: *a weekly revenue lake.*

AIRBYTE

Your data team

01	02	03	04	05	06
Choose connectors	Set auth and sync modes	Pick the destination	Write transforms in dbt	Model the lake	Watch syncs and drift

ADYA · AI ELT

The agent, you approve

01	02	03	04	YOU	05	06
Reads the goal	Reads every source	Maps the schemas	Builds the lake	**You approve**	Schedules refresh	Logs lineage

The agent does about 95% of the work. You approve the plan and data access.

What AI ELT does *on its own.*

WHAT IT DOES

01 PDFs, images and voice into structured data

02 Reads tables, charts and headers

03 Maps schemas across databases automatically

04 Builds and refreshes your data lake

05 Schedules runs so data stays fresh

06 Logs and audits every run

WHY IT MATTERS

It understands data

It works out what each source means and maps it to the target. No hand-built pipelines.

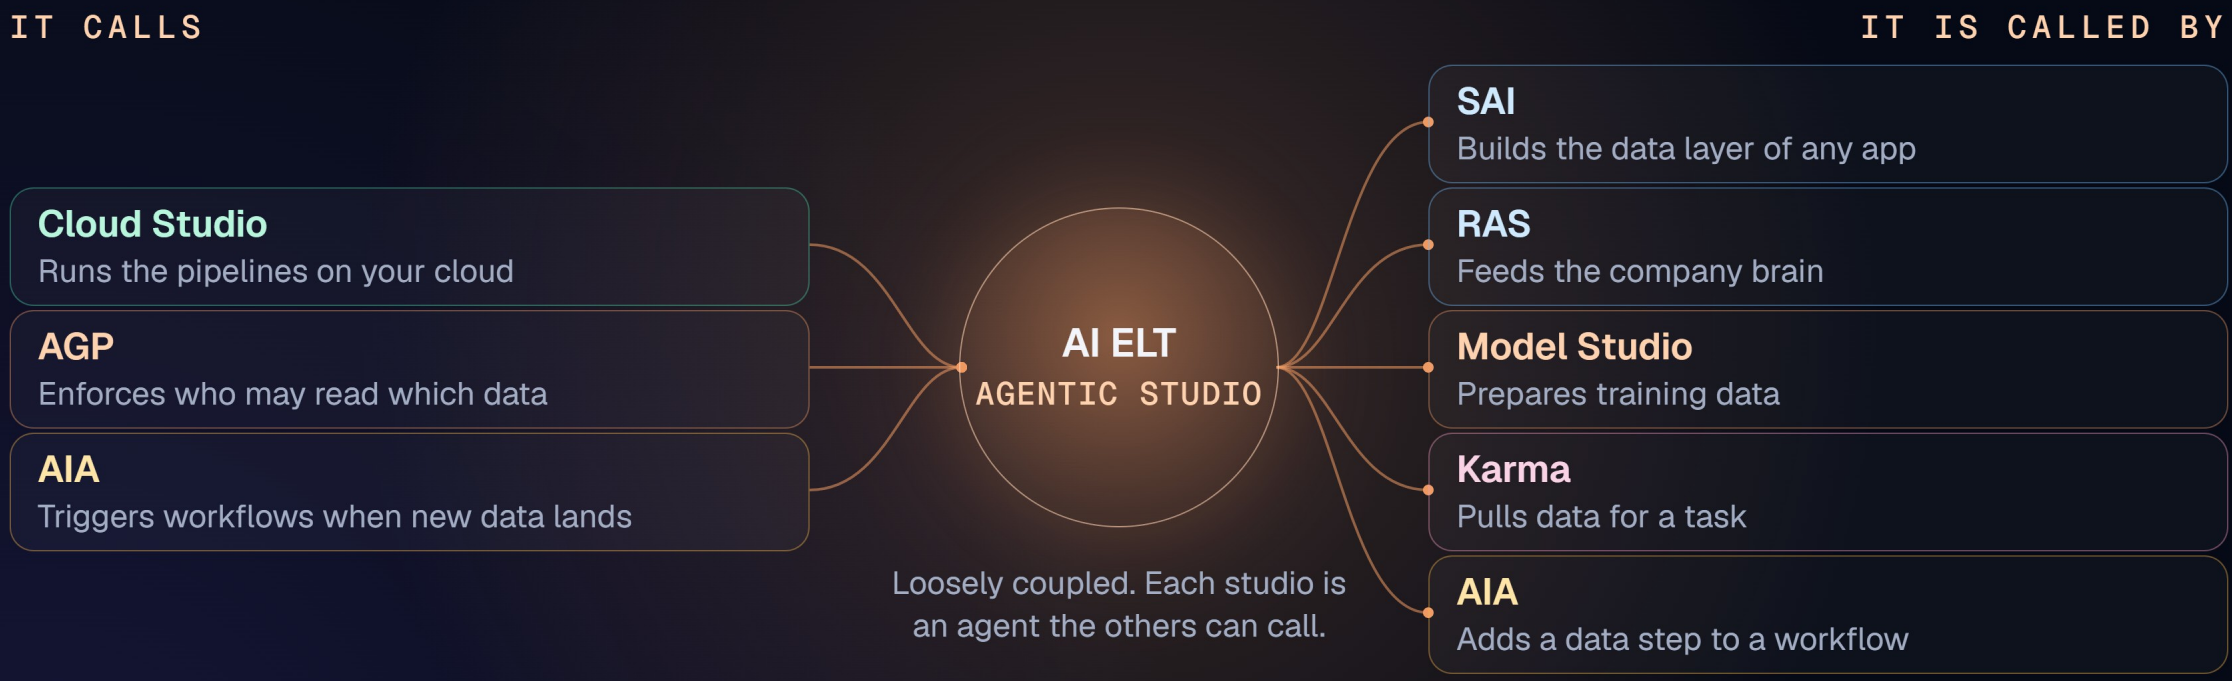

Always fresh

A scheduler keeps pulling new data, so agents never act on a stale copy.

Built for audit

Every run is logged with lineage, so you can show where an answer came from.

AI ELT feeds other studios, *and they call it.*

Under every studio, *the same three IPs.*

ESM · EVENT-SOURCED MEMORY

Remembers everything

Remembers your sources and mappings, so each new pipeline starts from what is already known.

AGP · ADAPTIVE GOVERNANCE

Rules agents cannot break

Data access is a rule, checked before any read or write. Every decision lands in the audit trail.

MAN HARNESS

Hundreds of agents, no bottleneck

Many sources ingested in parallel by many agents, with no central bottleneck.

Developer mode

Run any step by hand when you want to. The agent does about 95%; you supervise and decide.

Runs on your cloud

Pipelines and the lake stay in your tenancy, on AWS, Azure or Google Cloud.

Alone, it builds the lake.
Together, it answers the board.

"Every Monday, combine our invoices, CRM and ERP, and send leadership a revenue brief."

01
AI ELT
Reads invoices, CRM and ERP into one lake

→

02
RAS
Answers revenue questions in plain English

→

03
AIA
Assembles and emails the Monday brief

→

04
AGP
Keeps each reader to the data they may see

One request. Four studios. Data that arrives understood, every week.

Stop moving data. Start using it.

AI ELT understands it.

Thank you.
