COMPARISON · LAYER 5 · PLATFORMS

RAI vs Agentforce

set the goal, RAI runs the go-to-market.

An agent platform you configure job by job, against one goal-driven agent that learns your business and runs every channel.

Shayak Mazumder
Founder, CEO and CTO, Adya AI

SALESFORCE AGENTFORCE

Agents you build and configure on your CRM.

vs

ADYA · RAI

One goal-driven agent that runs your whole GTM.

AGENTIC MODE

Two ways to put agents on revenue: *configure jobs, or set a goal.*

AGENTFORCE · YOU CONFIGURE IT

Agents on Salesforce, set up one job at a time.

01 Agent Builder: topics, actions and guardrails

02 Prebuilt SDR, coach and service agents

03 Priced per action, conversation or user

RAI · THE GOAL DRIVES IT

You set the target. RAI researches, plans, runs and learns.

01 Learns company, products, ICP, competitors, trends

02 Finds leads, reads signals, runs every channel

03 Runs its own experiments inside a deterministic control plane

What Agentforce does well, *and where RAI keeps going.*

WHERE AGENTFORCE IS STRONG

Native to the CRM
Agents work directly on Salesforce records and Data 360.

Enterprise scale and trust
A large customer base, security reviews already passed, a deep ecosystem.

Strong on service
Customer service and inbound lead follow-up on existing data.

WHERE IT STOPS, AND RAI KEEPS GOING

Jobs, not a goal
RAI starts from the target and plans every channel and campaign to reach it.

It starts from your CRM
RAI researches the market, finds new leads and verifies contacts itself.

LinkedIn and Reddit need other tools
RAI runs email, LinkedIn, WhatsApp, voice, Reddit, ads and SEO from one plan.

RAI and Agentforce, *side by side.*

	Agentforce	Adya RAI
Starting point	Your Salesforce data	Your company and market, researched
Unit of work	One configured agent per job	One goal; RAI spawns the agents it needs
Lead discovery	Leads already in the CRM	Finds, enriches and verifies new leads
Signals	CRM and Data 360 activity	Jobs, ads, intent, posts, filings, rivals
Channels	Email, chat, voice, messaging	Email, LinkedIn, WhatsApp, voice, Reddit, ads
Content	Prompt Builder per use	Brand voice: static, AI-assisted or fully AI
Learning	You tune topics and actions	Runs experiments, promotes the winners
Pricing	Per user, action or conversation	About $0.01 per outreach touch

Agentforce details from Salesforce pricing and 2026 reviews, October 2026.

One goal, two journeys:
25 qualified meetings in 60 days.

AGENTFORCE

Your RevOps team

01	02	03	04	05	06
Design each agent	Write topics and actions	Connect data and channels	Add tools for prospecting	Monitor credits	Tune and repeat

ADYA · RAI

The agent, you approve

01	02	03	YOU	04	05	06
Learns your business	Finds and scores leads	Plans channels and cadence	**You approve**	Runs every channel	Drafts replies for you	Learns and re-plans

RAI does about 95% of the work. You approve the plan, and every reply before it goes out.

What RAI runs *toward your goal.*

WHAT IT RUNS

01 Research: company, ICP, personas, competitors

02 Leads, signals and buying committees

03 Email, LinkedIn DMs, InMail and connections

04 WhatsApp, voice and messaging campaigns

05 ABM and drip across channels, by ICP score

06 Content, SEO, Google Ads, offers, newsletters

HOW IT STAYS IN CONTROL

Goal-driven, always learning

RAI prioritises by ICP score and deal size, runs experiments and promotes only winners.

A deterministic control plane

Hundreds of agents, each inside budgets, permissions and deliverability guards.

Human assistant

When you are away, it answers routine questions for you if confidence is high.

And against the DIY stack: *Clay, Instantly and Claude Code.*

THE DIY STACK

Three good tools, and a person in the middle.

01 Clay: enrichment and research, billed in credits

02 Instantly: sending, warm-up and sequences

03 Claude Code: scripts that glue them together

04 You: strategy, copy, analysis and memory

ADYA · RAI

One brain, one memory and one loop.

01 Research and enrichment built in

02 Every channel from one plan

03 No glue code to maintain

04 Strategy, experiments and memory run by RAI

A stack is a chain that leaks. What outbound learns never reaches the ads or the copy.

Same 12,000 qualified leads, *a fraction of the cost.*

$166 → $0.33
Cost per qualified lead

200 → 20
SDR seats to produce them

~$2M → ~$48K
Annual top-of-funnel cost

~$0.01
Per outbound reach-out

On this funnel math, 36,000 meetings become 12,000 qualified leads and about 600 net-new customers a year.

RAI calls other studios, *and they call RAI.*

IT CALLS

Voice Studio
Runs voice calling campaigns

WhatsApp Studio
Runs conversational campaigns

RAS
Researches markets and competitors

AIA
Builds GTM automations on demand

RAI
AGENTIC STUDIO

Loosely coupled. Each studio is an agent the others can call.

IT IS CALLED BY

Karma
Runs outreach on your behalf

SAI
Adds a GTM engine to any product it builds

Under every studio, *the same three IPs.*

ESM · EVENT-SOURCED MEMORY

Remembers everything

Memory by account, user, session, campaign and target group. Nothing learned is lost, and every touch costs fewer tokens.

AGP · ADAPTIVE GOVERNANCE

Rules agents cannot break

Brand voice, claims, spend and deliverability are rules, checked before anything is sent.

MAN HARNESS

Hundreds of agents, no bottleneck

Hundreds of agents work every account in parallel, with no central bottleneck.

A person approves every reply
When a prospect responds, RAI drafts and a human sends. Always.

Marketplace and tutorials
Hundreds of ready campaign templates to clone, plus tutorials.

Stop configuring agents by the job.

Set the goal.

Thank you.
