COMPARISON · LAYER 5 · PLATFORMS

SAI vs Claude Code

the whole factory, from one prompt.

The best-known agentic coding tool, against a platform that specs, builds, deploys, governs and runs the whole system.

Shayak Mazumder
Founder, CEO and CTO, Adya AI

CLAUDE CODE

An agentic coding tool a developer drives.

vs

ADYA · SAI

A SuperAgent that builds and runs the full lifecycle.

AGENTIC MODE

Two ways to build with agents: *write the code, or ship the system.*

CLAUDE CODE · A DEVELOPER DRIVES IT

Excellent at code, inside a repo a developer owns.

01 Reads, writes and tests code in your codebase

02 Extends with MCP, skills, hooks and subagents

03 Cloud, data, models and governance wired by you

SAI · THE PLATFORM RUNS IT

One prompt to a governed, deployed, running system.

01 PRD, architecture, UX, DFD and ERD agents

02 ~38 coding sub-agents with adversarial and test gates

03 Deployed by Cloud Studio, run under AGP

SAI is model-agnostic and routes across about twelve major models, Claude among them.

What Claude Code does well, *and where SAI keeps going.*

WHERE CLAUDE CODE IS STRONG

Deep work in a codebase
Understands large repos, edits across files, and writes and runs tests.

A rich extension model
MCP, skills, hooks, subagents and plugins, packaged for teams.

Everywhere developers work
Terminal, IDE, desktop, web and CI.

WHERE IT STOPS, AND SAI KEEPS GOING

Anyone can prompt, SAI does the rest
SAI serves builders, SIs and founders who can describe the business.

Safety, Memory, Agents, Models, Channels
SAI brings cloud, data lakes, models and governance into the same run.

Build Operate Maintain
SAI deploys, observes and manages what it built, in production.

The same jobs, *and who does each one.*

Layer	Claude Code	Adya SAI
Spec and architecture	Plan mode inside the repo	PRD, architecture, UX, DFD and ERD agents
Coding	Agentic coding with subagents	~38 sub-agents, adversarial and test gates
Workflows	You script them or use MCP	AIA builds them on demand
Data and memory	CLAUDE.md and project memory	AI ELT lakes; ESM at four levels
Models	Claude models	Model agnostic; Model Studio trains your model as needed
Cloud and deploy	Your scripts and CI	Cloud Studio on AWS, Azure, Google Cloud
Governance	Permissions and hooks	AGP: your SOPs as rules, checked first
Observability	Session history	Control Tower: traces, audit and cost

Months of work, *in hours.*

~2 hrs

Prompt to working build

With spec, tests, deployment and governance

80–90%

Work done by agents

Humans supervise, guide and decide

#6

SWE-Bench at launch

SAI's coding agent, March 2026

#8

Terminal-Bench 2.0 at launch

SAI, March 2026

WITHOUT SAI	CLAUDE CODE
A 10 to 15 person team, about six months	A developer drives each session

Benchmark ranks are global ranks at launch, March 2026.

SAI orchestrates *all fifteen studios.*

IT BUILDS WITH

Coding Agent
Writes, tests and attacks the code

AIA
Builds the workflows

AI ELT
Builds the data layer

Model Studio
Trains a model when needed

Cloud Studio
Deploys it all

Loosely coupled. Each studio is an agent SAI can call, and each can call back.

IT ALSO CALLS

WhatsApp Studio
Adds a WhatsApp channel

Voice Studio
Adds a voice agent

AGP
Governs every action

ESM
Remembers every build

Karma
Calls SAI to build a missing skill

Under every studio, *the same three IPs.*

ESM · EVENT-SOURCED MEMORY

Remembers everything

Memory at user, session, project and enterprise level. Every build starts from what worked before.

AGP · ADAPTIVE GOVERNANCE

Rules agents cannot break

Your SOPs and SLAs become rules agents follow by design. Ready templates for HIPAA, GDPR and DPDP.

MAN HARNESS

Hundreds of agents, no bottleneck

Hundreds of agents coordinate peer to peer. In our tests: 10 of 10 Terminal-Bench tasks, LangGraph 0 of 10.

Human assistant

When you are away, it answers routine questions for you if confidence is high. Spend and commitments wait.

Marketplace and tutorials

Hundreds of ready templates to clone, plus tutorials and certifications.

Use both if you like:
SAI runs everything around the code.

"Build a D2C analytics platform: CAC, LTV, margins and retention across channels."

01
SAI
Writes the PRD and architecture

→

02
AI ELT
Maps Shopify, ads and payments data

→

03
Coding Agent
Builds and tests the app

→

04
Cloud Studio
Deploys it in your cloud

→

05
Control Tower
Traces and governs it in production

Teams that love Claude Code keep it in the repo. SAI runs the spec, data, deploy and governance.

Stop stitching fifteen tools.

Just ask SAI.

Thank you.

Shayak Mazumder / Founder, CEO and CTO, Adya AI

IN ONE LINE

- **Claude Code**
  A coding agent a developer drives
- **SAI**
  A factory for the full lifecycle
- **Together**
  Code in the repo, everything else by SAI
