COMPARISON · LAYER 4 · CHANNELS

WhatsApp Studio vs AiSensy

describe the journey, get it built.

AISENSY

A console: templates, flows and broadcasts by hand.

vs

ADYA · WHATSAPP STUDIO

Agents that build, test and run the whole journey.

AGENTIC MODE

A WhatsApp console you operate by hand, against an agentic studio that builds the whole customer journey.

Shayak Mazumder
Founder, CEO and CTO, Adya AI

Two ways to run WhatsApp: *operate a console, or brief an agent.*

AISENSY · YOU BUILD IT

You write templates, draw flows and run broadcasts.

01 Templates written and submitted one by one

02 Chatbot flows sold as an add-on, five at a time

03 AI replies metered per message

WHATSAPP STUDIO · THE AGENTS BUILD IT

You describe the journey. The agents build all of it.

01 Forms, templates, catalogue and checkout

02 Sales, support and onboarding agents with handoff

03 Tested, versioned and published on your approval

Gupshup's Superagent (beta) does basic workflow creation. Like AiSensy, it does not build WhatsApp agents for you.

What AiSensy does well, *and where WhatsApp Studio keeps going.*

WHERE AISENSY IS STRONG

Official Meta partner
A WhatsApp Business Solution Provider popular with Indian SMBs and D2C brands.

The everyday toolkit
Broadcasts, click-to-WhatsApp ads, catalogues, payments and a shared inbox.

AI helpers
An AI template writer and an AI reply agent, sold as add-ons.

WHERE IT STOPS, AND WHATSAPP STUDIO KEEPS GOING

You prompt, Agents build the journey
The agents plan the journey and build every form, message and step in it.

Agentic Memory to reduce token count up to 60%
WhatsApp Studio's agents are built in, with ESM keeping each customer's context.

Flows, Payments, Forms, Templates, Conversational
Official WABA plus WhatsApp Web for communities, and links to voice, workflows and apps.

WhatsApp Studio and AiSensy, *side by side.*

	AiSensy	Adya WhatsApp Studio
Building a journey	Drag-and-drop flow builder	Agents build it from your brief
Templates	AI writer; you submit each one	Drafted per journey, approval tracked
Forms	WhatsApp forms	Multi-screen native forms with data mappings
Commerce	Catalogues and payments	Catalogue sync, checkout, verified payments
AI agent	Add-on, ₹1,350 for 1,000 AI messages	Built in, with tools, knowledge and handoff
Connection	Official WABA	WABA, plus WhatsApp Web
Testing	Send and check	Simulator: opt-outs, failures, duplicates, handoff
Memory	User memory in the AI add-on	ESM: preferences, contracts and tools

AiSensy details from AiSensy's pricing page and 2026 reviews, October 2026.

One brief, two journeys: *a WhatsApp storefront.*

AISENSY

You, every step

01	02	03	04	05	06
Write each template	Submit and wait for approval	Draw the flow	Set up catalogue and payments	Upload contacts and opt-ins	Broadcast and watch

ADYA · WHATSAPP STUDIO

The agents, you approve

01	02	03	04	05	YOU	06
Understand the brief	Connect your business	Build the journey	Forms, messages, commerce	Test every path	**You approve**	Publish and observe

The agents do about 95% of the work. You approve the release.

Faster, leaner,
and it remembers every customer.

5–10×

Better performance

Fewer turns, tokens and cost per conversation

AISENSY
Each chat starts from what the flow hard-codes

100s

Agents in parallel

Each running its own journey from one studio

AISENSY
Five flows per ₹2,500 add-on

10

Journeys ready to clone

Checkout, onboarding, support, OTP, booking and more

AISENSY
Build each flow by hand

2

Ways to connect

Official WABA, or WhatsApp Web for communities and groups

AISENSY
WABA only

ESM is the same memory layer behind RAS's 3.9x token cut against Claude Life Sciences, published October 2026.

What the agents build *from one brief.*

WHAT IT BUILDS

01 Sales and support agents with handoff

02 Campaigns and broadcasts, consent first

03 Native forms for onboarding inside the chat

04 Catalogues, checkout and payments

05 Communities and groups at scale

06 WhatsApp calling

WHY IT MATTERS

Agentic and developer modes

Keep the conversation beside the work, or take the canvas and edit any step.

Every change versioned

Edits reset approvals. The published version stays pinned until you approve the next.

Events, traces and costs

See every step, tool call, message and token behind each customer outcome.

WhatsApp Studio calls other studios, *and they call it.*

IT CALLS

AIA
Builds the back-end workflow

Voice Studio
Calls the customer when chat stalls

Coding Agent
Builds the storefront or app around it

Cloud Studio
Deploys the journey and its services

WhatsApp Studio
AGENTIC STUDIO

Loosely coupled. Each studio is an agent the others can call.

IT IS CALLED BY

RAI
Runs conversational campaigns

Karma
Messages on your behalf

SAI
Adds WhatsApp to any app it builds

AIA
Adds a WhatsApp step to a workflow

Under every studio, *the same three IPs.*

ESM · EVENT-SOURCED MEMORY

Remembers everything

Remembers each customer's preferences, contracts and tools across every chat. Fewer turns and fewer tokens.

AGP · ADAPTIVE GOVERNANCE

Rules agents cannot break

Keeps every message within policy: consent, opt-outs, claims and spend. A failed rule means no send.

MAN HARNESS

Hundreds of agents, no bottleneck

Hundreds of agents run hundreds of journeys in parallel, with no central bottleneck.

Developer mode

Run any step by hand when you want to. The agent does about 95%; you supervise and decide.

Journey templates

Clone a ready journey: checkout, onboarding, support, OTP, booking or NPS.

Alone, it runs the chat.
Together, it runs the store.

"Let customers browse, pay and track orders on WhatsApp, and call them if a payment fails."

01
WhatsApp Studio
Builds the catalogue, checkout and order tracking

→

02
AIA
Syncs orders, stock and the CRM

→

03
Voice Studio
Calls customers when a payment fails

→

04
Coding Agent
Builds the web storefront and dashboard

→

05
Cloud Studio
Deploys it in your tenancy

One brief. Five studios. ESM remembers every customer across chat and calls.

Stop drawing flows. Start describing.

The agents build it.

Thank you.

Shayak Mazumder / Founder, CEO and CTO, Adya AI
